

Pro CUT<

Foam protector automatic cutting machine

Our ProCut product is an absolutely unique development in the manufacture of furniture foam corner protectors. The ProCut system is designed for cutting soft corner protectors from O-shaped foam polyethylene profiles. Presently we are the only company on the European market producing this product mechanically and also supplying equipment for its manufacturing. Our corner protectors are very popular packing material in Europe. Usually corner protectors are used for new furniture packaging and when moving to a new apartment. If your company is exporting furniture to Europe, this type of packaging will benefit your corporate reputation and help to protect all furniture corners which are most subject to mechanical damage.

ProCut Standard Features:

- Mechanical cutting of the foam corner protectors
- Performance up to 500 corners per hour
- Fully automatic process
- Fully programmable controller with LCD display
- Corner counter
- Low noise mechanical parts
- High quality cutting knives
- High quality pneumatic components

ProCut Safety Features:

- Conforms to current HSE legislations
- Emergency quick stop button
- All mechanical parts are covered

ProCut Options:

- Different RAL colors upon request
- Advanced controller
- Performance up to 850 corners per hour
- Support table with adjustable height
- Visual and Audio signal about short O-shape profile
- Additional noise reduction isolation

ProCut specification:

MODEL	ProCut
Product	Foam corner protector
Product variations	Thikcness: 0.5, 0.7, 1.0, 1.2, 1.4, 1.6, 1.8, 2.0 cm (other size is available) Dimension: 75 mm, 100 mm
Working principle	Mechanical cutting from polyethylene cylinder
Max performace	Up to 500 foam corners per hour
Control	LCD display with programmable controller
Compressed air consumption	350 l/min, 7.5 bar
Power	800 W
Power supply	220V, 50 Hz
Weight	44 kg
Machine weight incl. packing	49 kg
Dimensions	900 x 440 x 440 mm
